THE SAMPLING VALVE

HECLIPSE

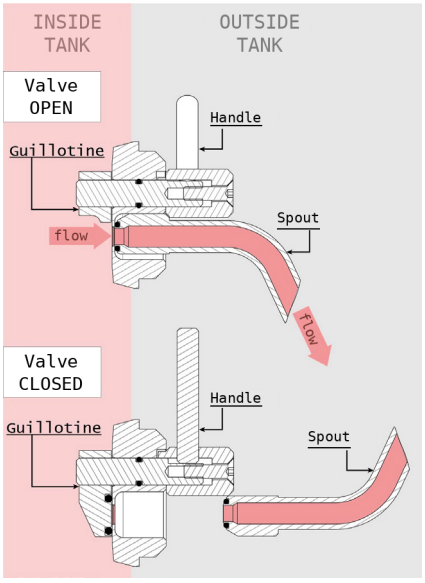

TO BUILD INTO YOUR NEW TANK PROJECTS

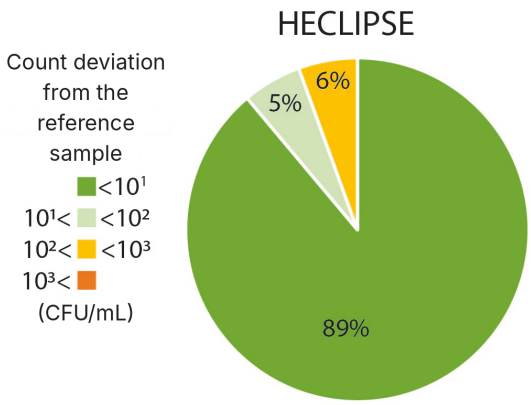

Designed
& Made

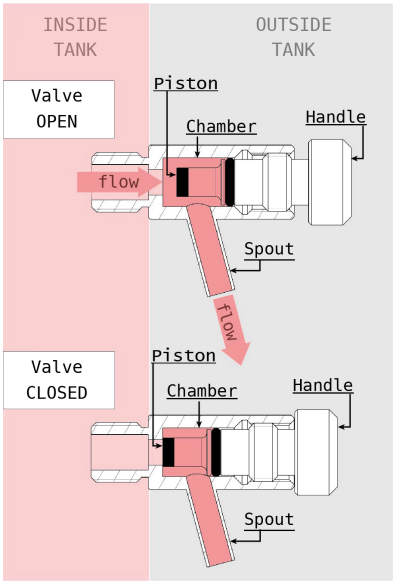

Samples 4 times more reliable

Whether for sensory, chemical or microbiological analysis, the HECLIPSE sampling valve delivers reliable samples in a very short time, without purging. Its innovative technology reduces the areas to be cleaned while keeping them accessible. The results are conclusive: they are highlighted in the study carried out by the ISVV (Institute of Vine and Wine Science) and presented in the Cahiers Techniques of the Revue Française d'Œnologie no. 305 (May/June 2021).

Guaranteed flow, even during winemaking

A sampling valve that clogs during winemaking means a significant and unpredictable loss of time in an intense period of work. HECLIPSE technology ensures you can draw your samples even in the most difficult conditions.

The HECLIPSE guillotine mechanically pushes out any grape skins that could block the valve from the inside.

Ergonomic and secure

HECLIPSE features quarter-turn operation for precise and very fast flow control. Its safety washer prevents any accidental opening.
The washer automatically locks the mechanism as soon as it is released in the closed position.

Prevents tank contamination

To prevent tank contamination, food-grade fittings are essential. They are easy to dismantle, and the parts in contact with the wine are smooth and accessible for fast and thorough cleaning. The HECLIPSE sampling valve offers these advantages in three versions: MACON, DIN or CLAMP.

MACON 43

DIN 40

CLAMP
ISO 32 or DIN 40

Other fittings are available to suit all your tank configurations: concrete tanks, wooden tanks and your older tanks.

HECLIPSE: more than a sampling valve!

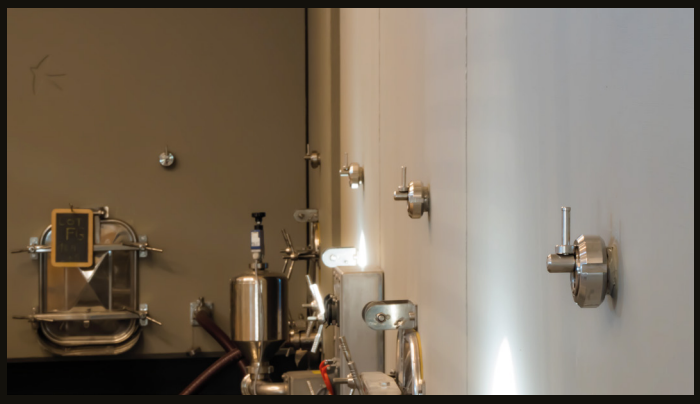

HECLIPSE lets you use the PASS-THROUGH ADAPTER to measure the density of the wine with an electronic density meter, directly in the tank, without drawing a sample.
